CONTACTS

David Scully Landscape and Biodiversity Officer Tunbridge Wells Borough Council

Sally Marsh Co-Director High Weald AONB partnership

Lis Dyson County Archaeologist Kent County Council - Heritage Section

Paul Cuming HER Manager Kent County Council - Heritage Section

The views expressed in this report are entirely the author's own and do not reflect the policies of neither Tunbridge Wells Borough Council, Kent County Council nor the High Weald AONB.

ACKNOWLEDGEMENTS

The revised Historic Landscape Characterisation for the Borough of Tunbridge Wells could not have been undertaken without the dedicated support of David Scully, Landscape and Biodiversity Officer at Tunbridge Wells Borough Council and also Lis Dyson County Archaeologist at Kent County Council. The Tunbridge Wells Borough Historic Landscape Characterisation builds on the project begun by the High Weald Area of Outstanding Natural Beauty [AONB] Partnership. This work could not have been undertaken without the help of Paul Cuming Kent Historic Environment Records Manager and Richard Dadd GIS Technician at Kent County Council. A 'Thank you' is extended to all.

Appreciation and thanks also goes to the team at the High Weald AONB Partnership especially Sally Marsh, Co-Director, Charles Winchester Landscape Researcher and Matt Pitts Land Manager Adviser.

My colleague Phil Sansum kindly undertook the processing of the missing Tithe maps for the Borough for which I am very grateful.

The Ordnance Survey map data within this report is provided by Kent County Council under licence from the Ordnance Survey. Licence No. 1000119238

**INTRODUCTION TO THE TUNBRIDGE WELLS HLC
HISTORIC LANDSCAPE CHARACTERISATION**

HOW TO USE THE REPORT

The Tunbridge Wells Borough Historic Landscape Characterisation comprises a GIS data set together with a set of supporting report and technical guide.

Although separate documents which can stand alone but it is recommended that anyone wishing to use HLC in depth should read them all in sequence.

The reports in order of sequence are as follows;

- Section I. Tunbridge Wells Borough Historic Landscape Characterisation – Report & Interpretation
- Section II. Tunbridge Wells Borough Historic Landscape Characterisation – Gazetteer of HLC Typology
- Section III. Tunbridge Wells Borough Historic Landscape Characterisation – Atlas of Maps

The core of the HLC is the Interpretation, Atlas of Maps, and Gazetteer of Typology. These describe and explain the selected results of the characterisation process for Tunbridge Wells. For those wishing to use HLC for their own researches or to support searches from the HER, Section I is the key document to refer to. The Appendices set the background for the method and for the characterisation process.

How to use the reports

If you want to know about the HLC for a particular area, then follow the Summary Guide at the beginning of Section I. For a more detailed account of an HLC see the Sussex Historic Landscape Characterisation reports available to view on the http://archaeologydataservice.ac.uk/archives/view/sussex_hlc_2014/downloads.cfm

For further information on the Historic England Characterisation programme go to <https://www.historicengland.org.uk/research/current/discover-and-understand/landscapes/>

TUNBRIDGE WELLS BOROUGH REVISED HISTORIC LANDSCAPE CHARACTERISATION SECTION III – ATLAS OF MAPS

How to use the Tunbridge Wells Borough GIS Project

The following is a basic guide to looking at the GIS project. The data is presented for the Final unioned layer of all the parishes. The Tunbridge Wells Borough HLC (TWB HLC) final layer has been 'queried' using the 'select by Attributes' tool to show both the attributes character and for the period of origin. The latter gives a picture of the time depth and antiquity of the present landscape. The previous historic landscape character layers have also been queried to show how the historic character for areas of the Borough which have experienced several changes over time.

Opening up the project

The GIS data is loaded on to its own project. In a folder called **TWB HLC GIS Final Layer**.

Open up the project **Tunbridge Wells HLC.mxd** in Arcmap (9.3.1.)

The project contains the main layer **TWB_HLC_2017_Final_Layer.shp** together with extracts 'queried' from this layer. This is to illustrate some of the potential of the HLC and which are used in Sections I & III of the Report.

Also included in the project are .shp files for the key boundaries in order to assist locating areas;

Tunbridge Wells Borough Boundary [**Tunbridge_Wells_Borough.shp**]

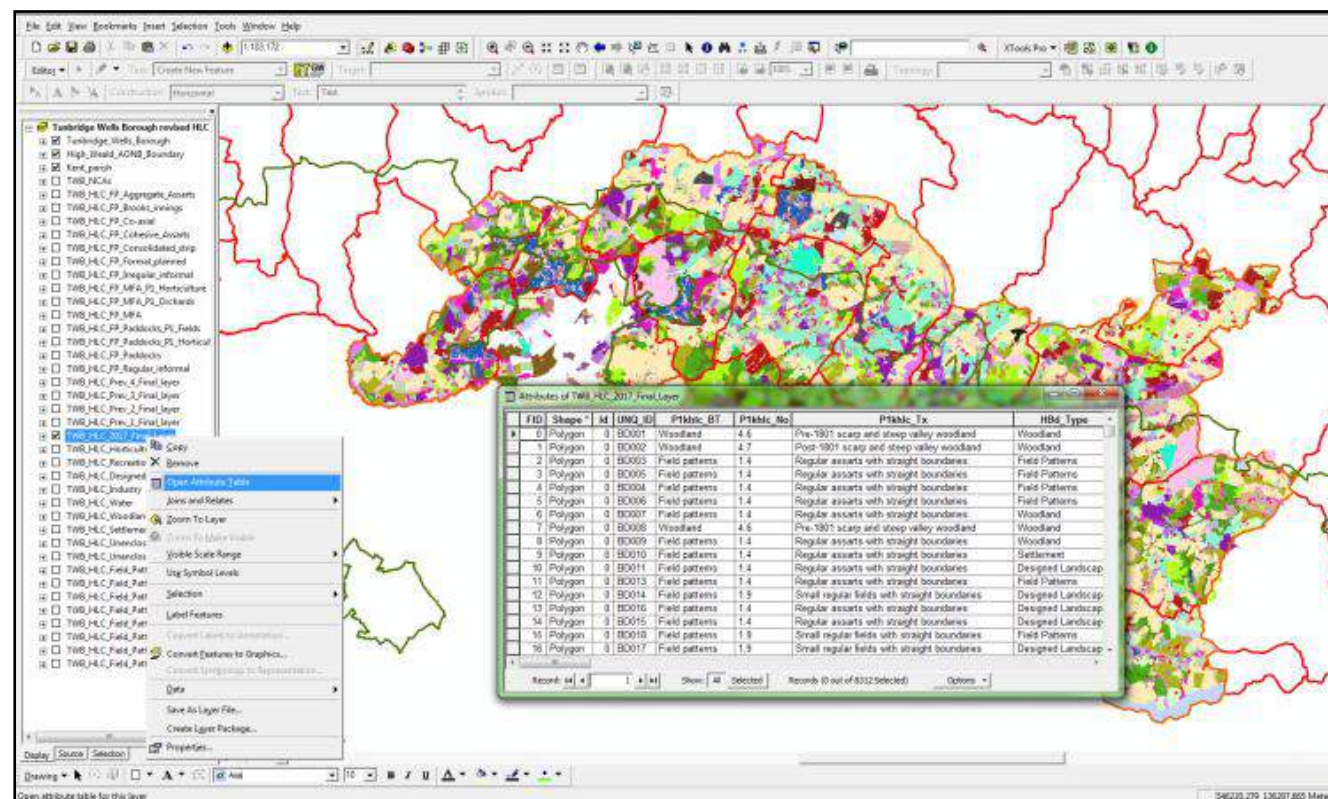

High Weald AONB Boundary [**High_Weald_AONB_Boundary.shp**]

Kent Parishes [**Kent_parish.shp**]

National Character Areas for Tunbridge Wells [**TWB_NCAs.shp**]

These can be supplemented by other GIS data sets available to the Borough.

The Attribute Table

There are numerous ways for presenting the data based on the attributes in the data fields attached to each polygon. These are stored in a table attached to the data set.

To open the table Right click on the layer **TWB_HLC_2017_Final_Layer**. Scroll down to **Open Attribute Table** and the table will appear showing all the fields with the data.

When viewing queried layers from this layer the latter has to be below the queried layers otherwise for obvious reasons it will cover the queried layers.

Style Sheets [alias the legends or keys]

Several style sheets have been produced for the attributes of the data set. These are legends with the colours which match those described in the Typology Gazetteer at the end of this document. The style sheets are for the main attributes and should be self-explanatory. They are stored in a separate folder [TWB_HLC_Style_sheets]. The Arcmap opens with the style sheets already matched but to change them follow the steps below:-

Right click on the layer **TWB_HLC_2017_Final_Layer**. Scroll down to **Properties** Left click on it. It opens a menu – **Layer Properties**. Click on the **Symbology** tab.

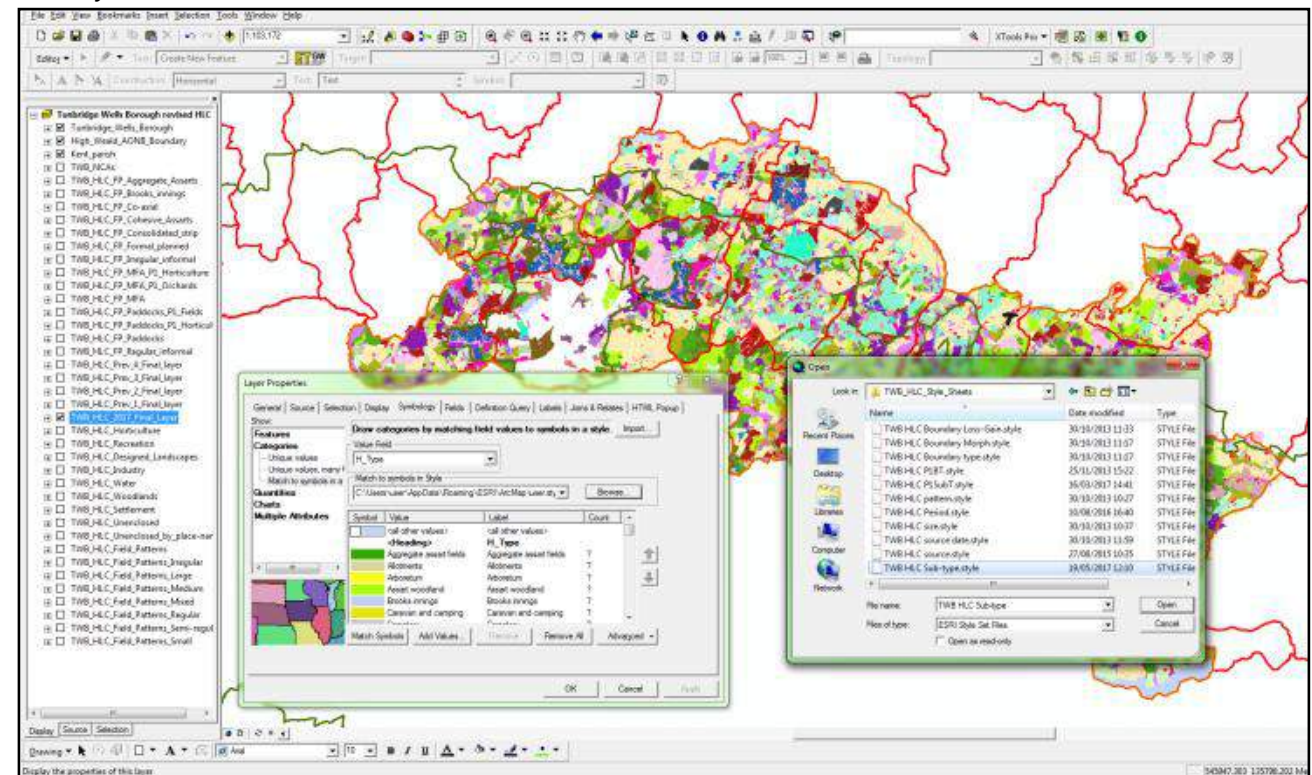

On left side click on **Categories** and scroll down to **Match to Symbols in a style sheet**.

In the **Value Field** scroll down to the attribute field heading to be displayed.e.g. **Mor_patt**.

Right Click on **Browse**. Scroll down the style sheets until reach **HW Kent HLC pattern.style**, click on it and then on **Open**. Then click on **Match Symbols** and **Apply, OK**. The legend and map will change.

Style sheets have been produced for each of the groups of attributes, for the present landscape. The style sheets for Broad Types and Types can also be used for each of the PREV layer Broad Types and Types, together with the one for period.

The Style Sheet

The Final layer has then been split into its component HLC Broad Types [**TWB_HLC_Field_Patterns**; **TWB_HLC_Unenclosed**; etc], which were used to produce the maps in Section III.

The Field Pattern layer has also been split into component parts based on attributes of size and shape. In order to understand the origins of the modern field amalgamation type, this layer has been presented based on its previous historic landscape character.

TUNBRIDGE WELLS BOROUGH REVISED HISTORIC LANDSCAPE CHARACTERISATION SECTION III – ATLAS OF MAPS

For example any given polygon identified in present landscape as modern field amalgamation will have a previous historic character in its PREV1_BT and Prev1_Type fields in the attribute data base. These extracted .shp file layers are named **TWB_HLC_FO_MFA_P1_Orchards** etc.

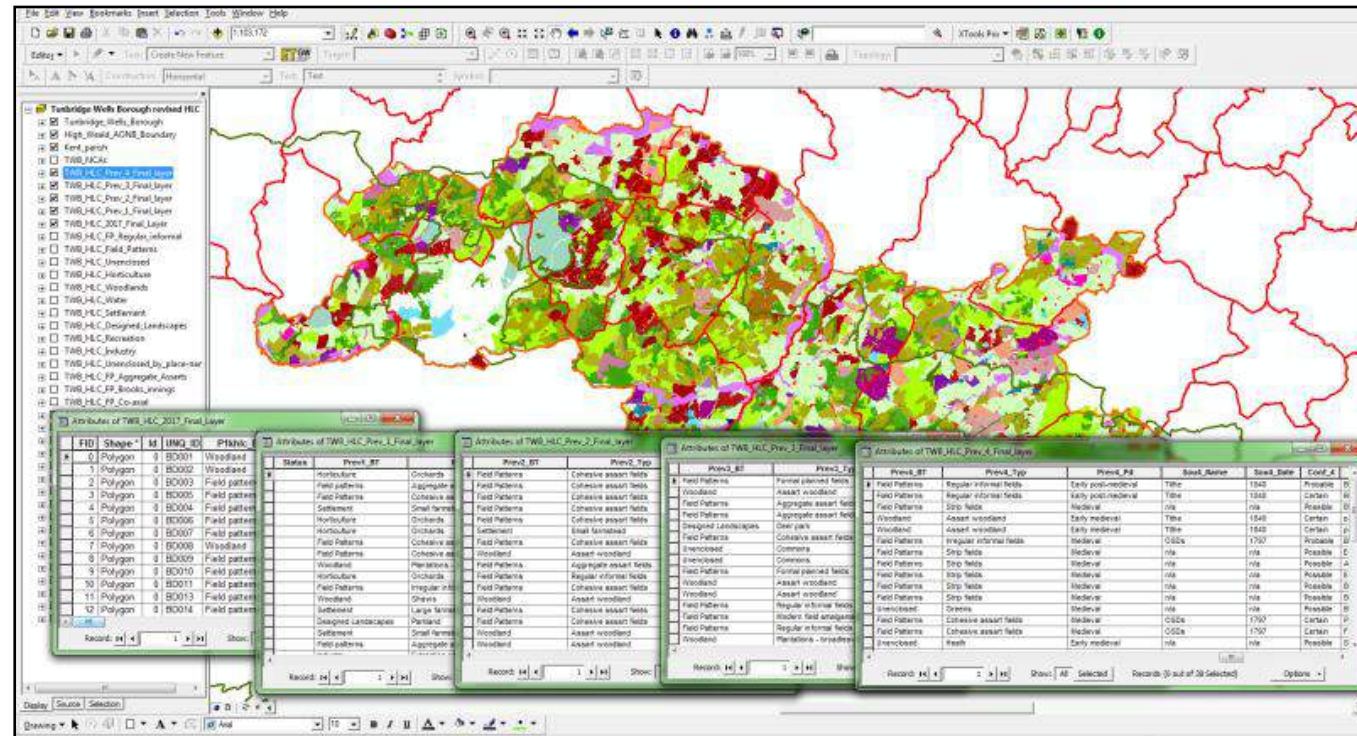

Presentation of 'Time slices' or periods representing a change in historic landscape character

As already mentioned above, the HLC attribute table records changes in historic landscape character in the past. The PREV1-PREV4 fields in the attribute table represent up to four changes in historic landscape character for any given polygon. They are not fixed points in time, but represent a change of character. Each 'prev' gives the attributes of Broad Type and Type, its period of origin, the source where the change is recorded and its date.

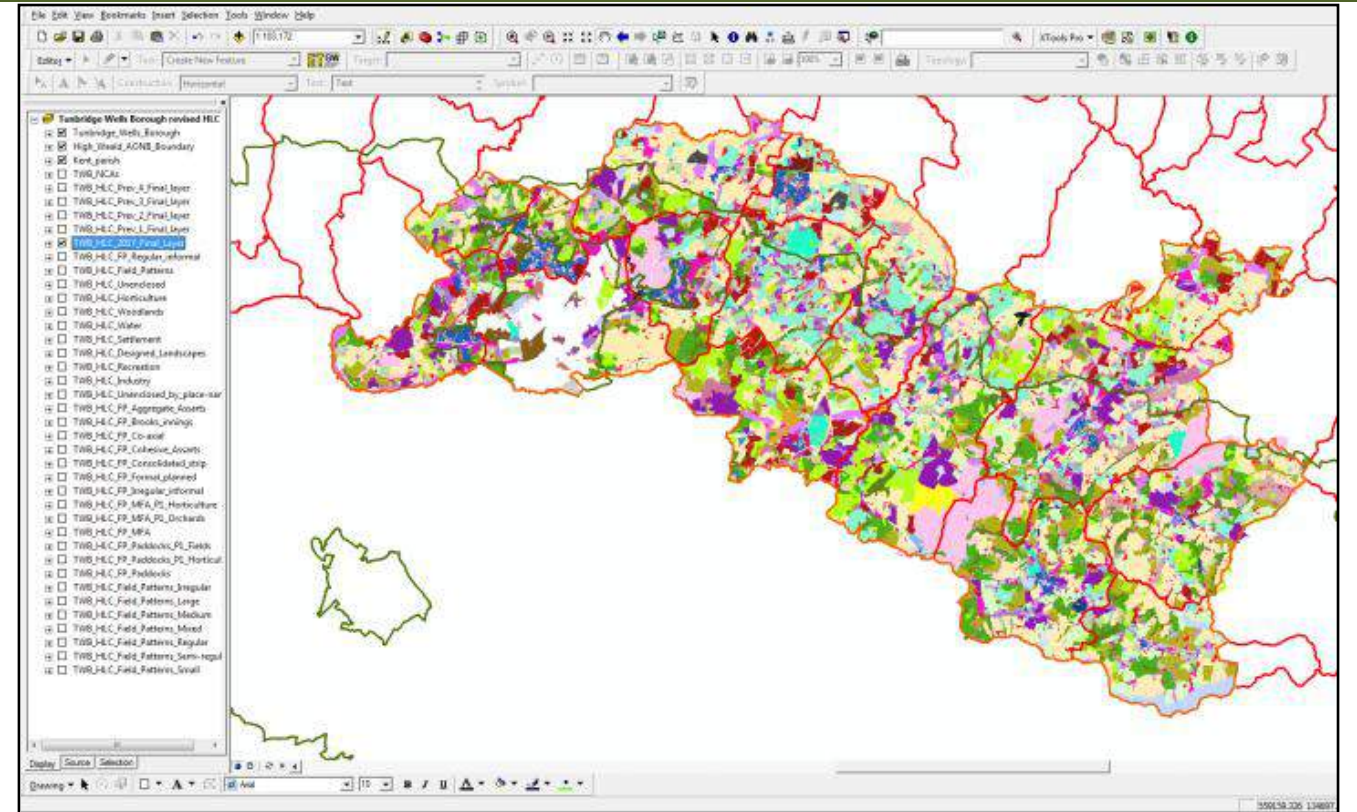

By layering extracted Prev layers in sequence over the TWB_HLC_2017_Final_Layer a postulated late medieval – early post-medieval historic landscape character map is produced.

It is also possible to query the Final layer and the Prev layers for those polygons with attributes for the period of origin which would give time-slices for fixed points in time, such as the 1940s (RAF AP) or 1890s (OS Epoch 2).

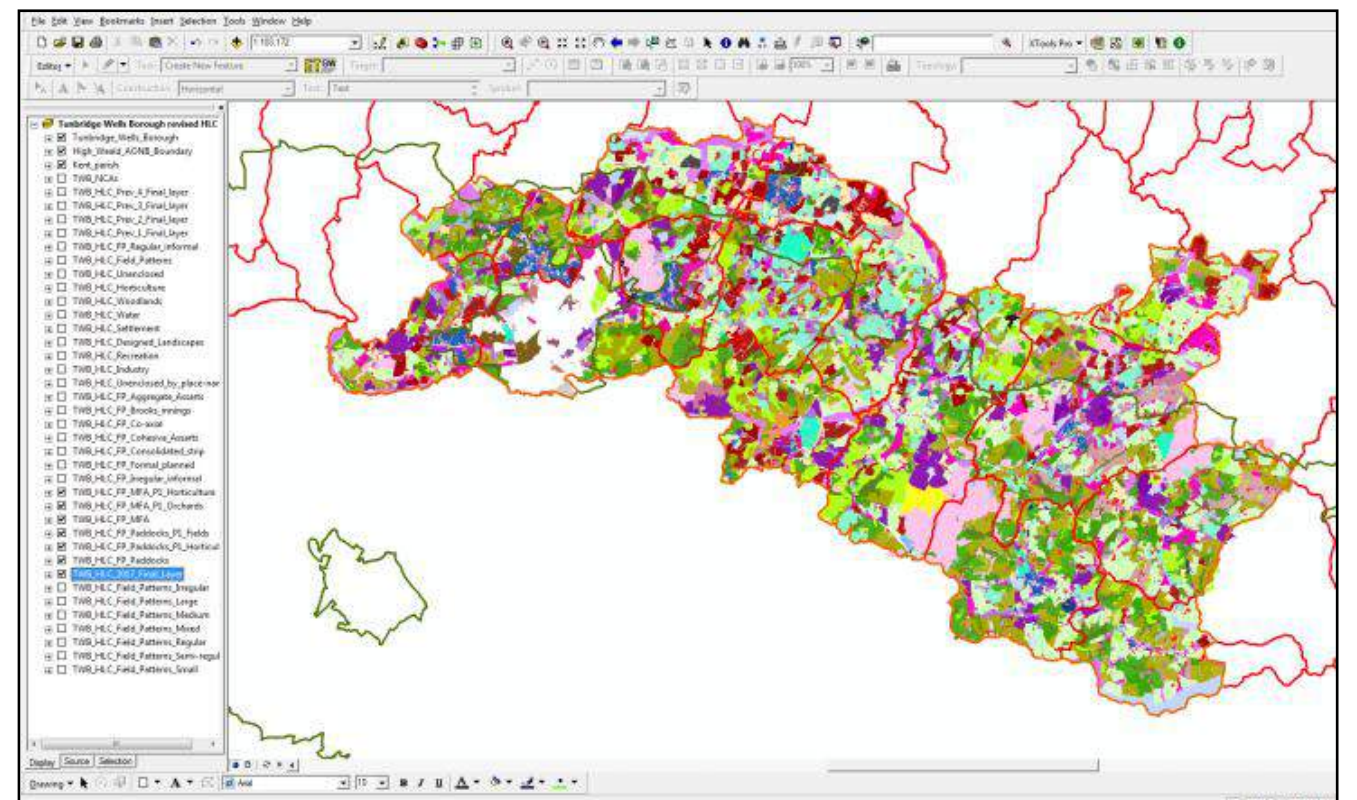

The Previous Layers

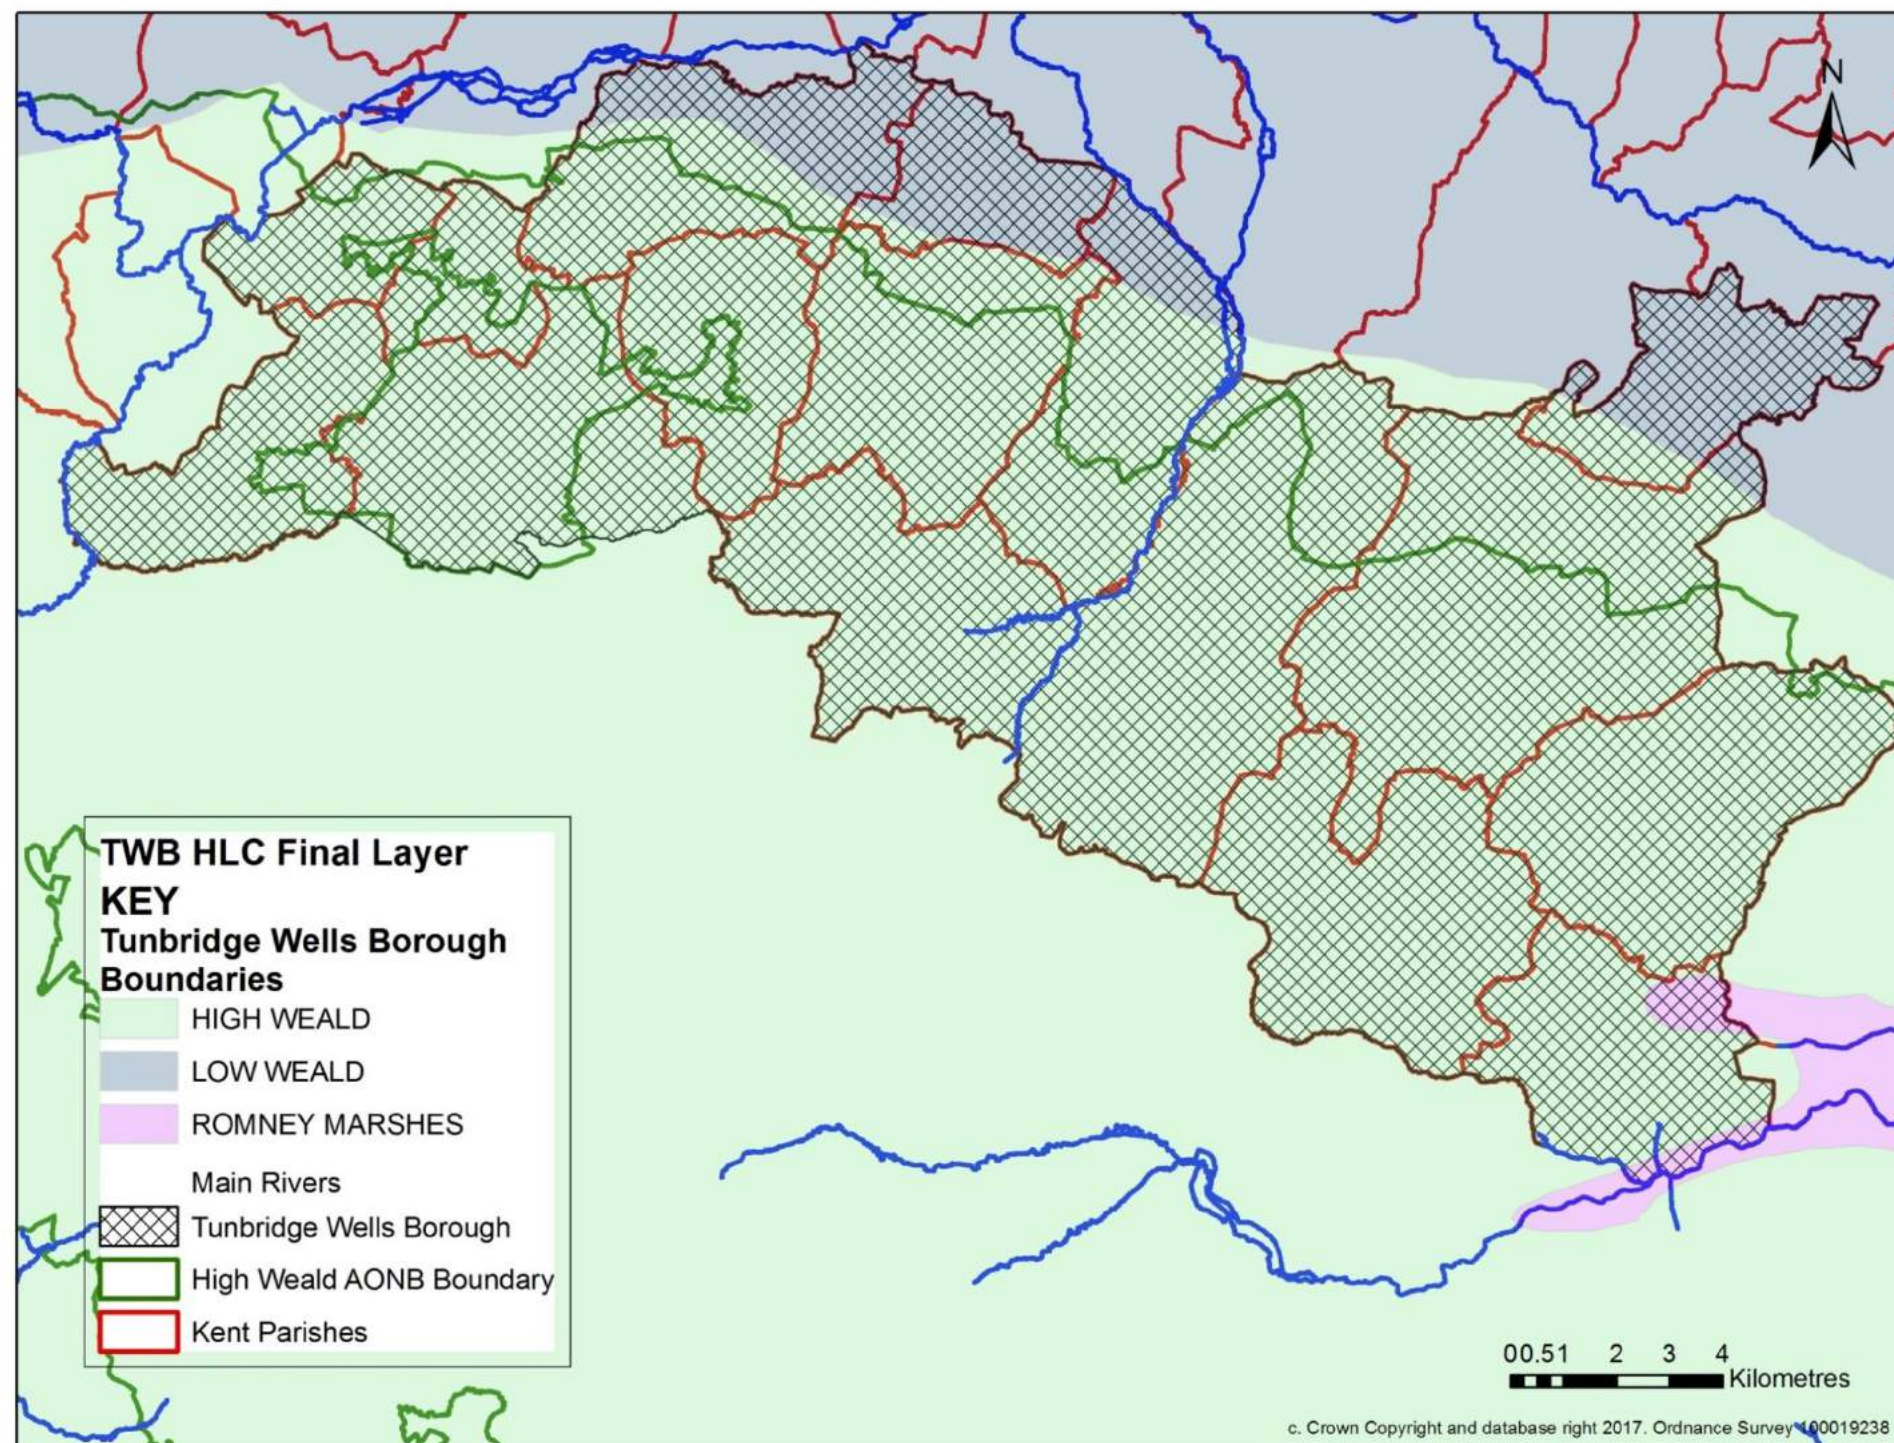

For the colour keys see - Section II The Gazetteer of HLC Types
